Learn the basics of JMP®

With short videos & step-by-step guides

We have created a series of introductory videos with guides to help get you started with the basic functions of JMP. This series will guide you through some of the most commonly used steps in the data analysis process. Since this introduction is designed to accompany the [free trial of JMP](#), we recommend watching the videos and trying the steps yourself in JMP.

Nine 2 to 5-minute videos
plus a PDF step-by-step guide

https://www.jmp.com/en_us/jmp-trial/learn-the-basics-of-jmp.html

Import Data

Learn how to import Excel data, modify column properties and save your data.

▶ Watch video 3:32

> Step-by-step guide (PDF)

Explore Distributions

Become familiar with the red triangle menu, see how graphs and data tables are linked, and discover how to select points to hide/exclude.

▶ Watch video 3:23

> Step-by-step guide (PDF)

Explore Relationships

Once you learn how to build better models, use the JMP Profiler to compare and contrast them.

▶ Watch video 2:55

> Step-by-step guide

Build a Dashboard

Get the full picture by using the complete workflow to build dashboards quickly and easily.

▶ Watch video 1:58

> Step-by-step guide (PDF)

Publish Results

Publish analyses and visualizations to JMP Public, public.jmp.com.

▶ Watch video 3:04

> Step-by-step guide (PDF)

Visualize and Summarize Data

Build and customize interactive graphs and tables.

▶ Watch video 4:00

> Step-by-step guide (PDF)

Data Cleanup

Complete basic data preparation using Recode and Formula Columns.

▶ Watch video 4:54

> Step-by-step guide (PDF)

Save and Automate Your Work

Learn how to save scripts to a data table, and how to export to Excel or Powerpoint.

▶ Watch video 1:41

> Step-by-step guide (PDF)

Share Interactive Results

By putting your reports in a browser, you can share your results with anyone, even if they don't have JMP.

▶ Watch video 1:49

> Step-by-step guide (PDF)

Welcome to the Statistics Knowledge Portal

Why SKP?

There are many sources of information across the Internet for those seeking to learn about statistical concepts. Our goal in creating the Statistics Knowledge Portal, or SKP (affectionately pronounced “skip”), was to uniquely combine concise explanations with illuminating examples and graphics to help visitors establish a firm foundation upon which to build statistical skills. Our hope is that SKP will contribute to the growing appreciation of the value of statistical methods and will inspire learners to journey farther.

Why Statistics?

Statistics is more than just math, and it's more than just a collection of methods to analyze data; statistics provides a way to think about the world in a principled fashion, to interpret the outcomes of events unfolding before us, to see the structure of things amidst the prevailing noise and randomness of our reality. If you work with data right now, or want to start a career where you will, there is nothing more valuable than a solid foundation in statistical methods.

Statistical Thinking for Industrial Problem Solving (STIPS)

A free online statistics course

In virtually every field, deriving insights from data is central to problem solving, innovation and growth. But without an understanding of which approaches to use, and how to interpret and communicate results, the best opportunities will remain undiscovered.

That's why we created Statistical Thinking for Industrial Problem Solving (STIPS). This online statistics course is available – for free – to anyone interested in building practical skills in using data to solve problems better.

Have two minutes? Learn more.

Enroll now

https://www.jmp.com/en_us/statistical-thinking.html

Statistical Thinking for Industrial Problem Solving (STIPS)

› Statistical Thinking and Problem Solving

Statistical thinking is about understanding, controlling and reducing process variation. Learn about process maps, problem-solving tools for defining and scoping your project, and understanding the data you need to solve your problem.

› Exploratory Data Analysis

Learn the basics of how to describe data with graphics and statistical summaries. Then, learn how to use interactive visualizations to communicate the story in your data. You'll also learn some core steps in preparing your data for analysis.

› Quality Methods

Learn about tools for quantifying, controlling and reducing variation in your product, service or process. Topics include control charts, process capability and measurement systems analysis.

› Decision Making With Data

Learn about tools used for drawing inferences from data. In this module you learn about statistical intervals and hypothesis tests. You also learn how to calculate sample size and see the relationship between sample size and power.

› Correlation and Regression

Learn how to use scatterplots and correlation to study the linear association between pairs of variables. Then, learn how to fit, evaluate and interpret linear and logistic regression models.

› Design of Experiments

In this introduction to statistically designed experiments (DOE), you learn the language of DOE, and see how to design, conduct and analyze an experiment in JMP.

› Predictive Modeling and Text Mining

Learn how to identify possible relationships, build predictive models and derive value from free-form text.

The instructional method is excellent...The lessons are short and tight. They have just the right amount of complex information broken down into manageable chunks.

Graphing

New Features

Graphing

This section describes new features and enhancements in the graphing platforms. For details, see the *Essential Graphing* book.

Graph Builder

- To assist with color blindness, protanomaly, deuteranomaly, and tritanomaly color theme filters are now available.
- The sampling feature enables you to choose a proportion, rather than an integer value.
- You can relabel levels, combine levels into groups, and reorder levels on the axis without having to edit the column properties.
- Mode statistic is now an option in the Summary Statistic report. This option affects coloring by the dominant level. To access this option, go to **Graph > Graph Builder > Points**. Choose **Mode** from the Summary Statistic list.
- Support is added for multiple response data. Multiple response columns can be used in each of the Graph Builder zones.
- You can use the hash pattern style indicator for bar charts.
- In bar charts, you can show one-sided confidence intervals. To access this option, right-click on a bar chart > **Customize > Error Bar**. Choose the **Upper** or **Lower** option from the Interval Sides list.
- If a continuous variable is used as the overlay variable, you can customize the bin values for the gradient. To access this option, right-click on the gradient in the legend > **Gradient**. Choose **Custom** in the Scale Type list and then change the level values.
- There are new ways to associate summary text in graphs and axes. For example, you can now display associated summary tabular data along the axes in Graph Builder. You can also change the position of the caption box. To access this option, change the X and Y position in the Caption Box options. You can customize the location of text in a caption or text box by right-clicking in the box > **Customize > Text**.
- JSL references to Graph Builder are now updated when starting over.
- You can now show the coefficient of variation (CV) statistic by selecting it in the Summary Statistic list.
- You can change the default color of histogram bars or outlines. To access this option, select **File > Preferences > Styles**. Choose a color for the Histogram Fill Color and Histogram Line Color.
- The Constrain Parameters option is now available for Exponential Smoothing (ETS) fits.

Profilers > Profiler > Desirability Profiling and Optimization

Desirability Profiling and Optimization

You can define a desirability function for a single response variable or for several response variables. When you are optimizing relative to several responses, there can often be competing criteria. For example, you might want to maximize one response, minimize another, and keep a third response close to some target value.

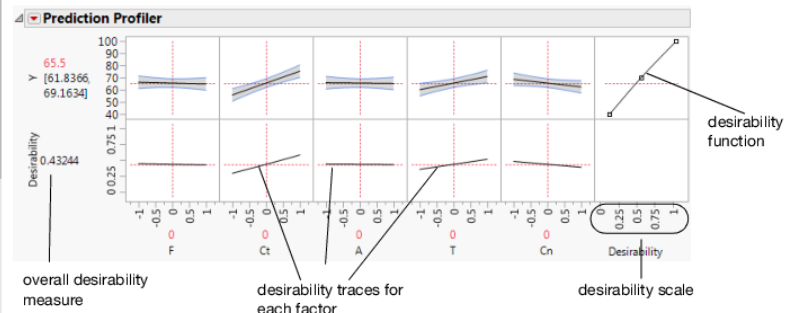

In desirability profiling, you specify a desirability function for each response. The overall desirability for all responses is defined as the geometric mean of the desirability functions for the individual responses. See Derringer and Suich (1980) for information about combining responses.

To use desirability profiling, select **Optimization and Desirability > Desirability Functions** from the Prediction Profiler red triangle menu.

Note: If the response column has a Response Limits property, desirability functions are turned on by default.

This command appends a new row to the bottom of the plot matrix, dedicated to graphing desirability. The row has a plot for each factor showing its *desirability trace*, as illustrated in [The Desirability Prediction Profiler](#). It also adds a column that has an adjustable desirability function for each Y variable. The overall desirability measure shows on a scale of zero to one at the left of the row of desirability traces.

The Desirability Prediction Profiler

You've invested in the most comprehensive, interactive and visual statistical discovery package out there. It's time to tap into its full potential.

Overview

Course Catalog

YOUR EDUCATION OPTIONS:

Take an on-demand course.

- We have a fantastic (free!) foundational online on-demand course that you can take at any time. No need to have a JMP license - you get access to JMP Pro through a web browser JMP application. Learn more at [Statistical Thinking for Industrial Problem Solving](#).
- We offer some free online on-demand courses:
 - [Introduction to the JSL Scripting Language](#)
- We have many online, on-demand courses included in a monthly (or yearly) subscription. Access one course, or take all of them - it's your choice! Learn more about the [JMP Learning Subscription](#).

Take a synchronous class.

- Take a public online course with a live instructor. Learn about all of our courses, and find our public course schedule and registration links from our [Course Catalog](#).
- Schedule a private course with a JMP Partner. See the list of [JMP Partners](#) and reach out to them directly.

Get help from a JMP Partner.

Let our consulting friends guide you through a tricky analysis, or coach you as you apply the methods you learned in class. See the list of [JMP Partners](#) and reach out to them directly for consulting or mentoring help.

Instructors with DoD Experience

Heath Rushing www.adsurgo.com

Heath is an American Society of Quality (ASQ) Certified Quality Engineer and the co-founder and principal consultant of Adsurgo LLC, a company specializing in advanced analytics consulting services and training for enhanced business performance. He has been a professor at the US Air Force Academy as well as a quality engineer and Six Sigma Black Belt in both biopharmaceutical manufacturing and R&D. Heath holds a master's degree in operations research from the Air Force Institute of Technology and has used JMP since 2001.

One of Heath's students said: "Heath was very professional and knowledgeable on both statistical analysis and the use of JMP software. He kept us on target and interjected a good amount of fun into the course when needed."

Jim Wisnowski www.adsurgo.com

Jim is Principal at Adsurgo LLC and has a PhD in industrial engineering from Arizona State University with an emphasis in applied statistics. He was an award-winning professor and statistics chair at the US Air Force Academy. Jim retired from the Air Force, where he held various analytical and leadership positions throughout the Department of Defense in training, testing and evaluation, human resources, logistics, systems engineering and acquisition.

One of Jim's students said: "Jim is top-notch instructor with vast knowledge of the subject matter. As well, his experience with DoD and military methodology, tools and policy proved especially helpful in his interaction with the class. For future training, I intend to request Jim."

JK Analytics
United States

www.jkanalytics.com

JK Analytics is a small business, veteran, woman owned company specializing in statistical analysis, experimental design, bio-statistics, operations research, and data analytic services. Their training services include 15 courses in statistics, reliability, analytics and design of experiments.
