

Custom PowerPoint Templates

PowerPoint presentations use the default JMP template. You can use a custom template by overwriting the default template file. To do this, open JMPExportTemplate.pptx located in:

C:\Program Files\SAS\JMP\<version number>\pptx\

C:\Program Files\SAS\JMPPro\<version number>\pptx\

C:\Program Files\SAS\JMPSW\<version number>\pptx\

Then, choose your own PowerPoint template, and select **File > Save**. The next time that you save JMP content as a PowerPoint, it opens with your custom template. Alternatively, create your custom template in PowerPoint first, and save it as JMPExportTemplate.pptx.
